Share of Spend vs Share of Results by Platform

Results Share and Spend Share by Platform

Spend Share

by Platform for the Selected Objective

Objective

- ○ Engagement
- ○ Leads
- ○ Reach
- ◉ Sales
- ○ Traffic
- ○ Video Views

Objective	Results Measure
Sales	Revenue

How to Read This

Each bar pair compares the share of budget a platform received with the share of results it delivered for the selected objective. A platform with a short results bar next to a long spend bar (like LinkedIn) is getting more budget than it earns back. These shares show average performance, not what the next dollar would earn, and Google Search may be collecting demand that other channels helped build, so some of its results could have happened anyway. Before moving a large budget, I'd test a 10 to 20% shift and measure the change.

Results Share uses a different measure for each objective, so compare platforms within an objective, not across them.
